Using Front Panel Update Tool

The Front Panel Update Tool program is used for installing new firmware into the CS800 or the CS801 front panel.

Step 1

First thing you need to do is download Front Panel Update Tool from our website. You can find the program at the following links:

https://www.csi-radios.com/support/connect-systems/cs800-1/

The program to downloaded is called FPUT.exe

Step 2

Once you get the program, just run it and you should get the following:

FrontBoard Upgrade Tool 1.5			- D X
Port			
Radio Type DM6000	Serial Port None	▼ Baud 38400	•
MCLI Rewrite			
			Flash
J			
Font Library			
			Flash
BT Upgrade File			
			Flash
		Chinese Verries	Abaut
			ADOUT

Step 3

Now download the Front Panel Firmware Version 2.00.14 (zip) and unzip the file. The unzipped file name is:

FrontPanel_DM6000_V2.00.14.fot

Put it in the same directory as FPUT.exe

Step 4

Attach the CS800 or CS801 radio to a power supply and turn on the power supply. If the radio turns on, turn it off.

Step 5

Attach the Programming cable between the RJ45 connector in the front of your radio and your USB port of the computer.

Step 6

Press the P7 switch and while it is pressed turn on the power by pressing the power switch until the display says

Program Mode

And the front panel LED is a solid red. The P7 switch is the rotary switch normally reserved for volume control.

Step 7

With your mouse left key, double click the button from the program you just ran that has three dots in the middle under the MCU Rewrite section.

You should get a window that looks similar to the one below.

Step 8

With the left key on your mouse, double click the line that says:

"FrontPanel_DM6000_V2.00.14.fot"

FrontBoard Upgrade Tool 1.5
Port Radio Type DM6000 Serial Port COM3 Baud 38400
MCU Rewrite C:\Users\Jerry\Downloads\FrontPanel_DM6000_V2.00.14.fot Flash Flash
Font Library
BT Upgrade File
Chinese Version About

The Front Panel Update Tool program should now look as follows:

Make sure there is something in the Serial Port box. In this case it is COM3. If there is nothing there, wait a few minutes and Windows will normally find the right driver and install it. If that does not work, download and install the driver.

Step 9

With the left key on your mouse, double click the button that says "Flash" just to the right of the line that was just inserted into the program.

The program should now look as follows:

Port	
Radio Type DM6000 Senial Port COM3	Baud 38400 -
MCU Rewrite	
C: Users Uerry Downloads FrontPanel_DM6000_v2.00.14. fot	Flash
Font Library	
	Flash
BT Upgrade File	
	Flash

When finished you should get the following message:

e ·	
ograde Success!	
	ОК
	Markatura

And the red led on the radio should turn off and the message on the screen should disappear. The radio is still on.

Press the power button for 10 seconds and then let go. The radio is now turned off.

You are finished!
